Arun Adhikari

Portfolio | +91-8291116159 | arunadhikari0000@gmail.com | GitHub | LinkedIn

Computer Science student with a strong foundation in Cybersecurity, Machine Learning, and AWS Cloud. Experienced in IT operations within the Marriott group and building secure, innovative Infrastructure. Committed to solving real-world problems through practical technical implementation and a security-first mindset.

Education

Bachelor of Technology in Computer Science and Engineering 2022-2026

Vishwakarma University, Pune CGPA: 8.1

Certifications: IBM Cybersecurity, Cisco Ethical Hacking, University of Colorado Network Security.

Experience

Cyber Security Intern *August - October 2025*
Georeach Technologies

IT Intern at Marriott *January 2026- Present*
Fairfield by Marriott

- Implemented GPNS security controls and supported CSAT audits and ICAR compliance.
- Assisted with Disaster Recovery (DR) and Business Continuity Planning (BCP) activities.
- Managed daily IT operations, including system troubleshooting, network support, and user requests.
- Monitored network, systems, and endpoint security to ensure reliable operations.
- Gained hands-on knowledge of AWS cloud, including VPC,EC2, subnets, security groups, and cloud networking.
- Learned Marriott's AWS infrastructure and enterprise network connectivity between on-premises and cloud services.

Projects

Insider Threat Detection using Machine Learning (GitHub)

- Engineered a real-time monitoring system using Flask, Socket.IO, and SQLite to track system metrics and user activity.
- Integrated a Machine Learning anomaly detection model with an admin dashboard for live threat alerts.
- Tech: Python, Flask, Socket.IO, SQLite, psutil, Joblib.

ISO/IEC 27001:2022 ISMS Implementation Project (LinkedIn)

- • Built an ISMS aligned with ISO/IEC 27001:2022, including risk assessment, SoA, and control implementation.
- • Applied Annex A controls (access control, encryption, incident management) and simulated audit & compliance processes.
- • Tech: ISMS, Risk Assessment, GRC, ISO 27001, Security Policies.

MFA & Face Login Website(GitHub)

- Developed a secure authentication platform featuring **SHA-256 password encryption**, OTP email verification, and facial recognition login.
- Implemented frontend-backend integration for multi-factor security workflows.
- **Tech:** Flask, OpenCV, SHA-256, smtplib

Face Recognition & Detection Software (GitHub)

- Implemented real-time face detection and recognition using **OpenCV**, **Haar Cascades**, and **LBPH** algorithms.
- Developed a custom pipeline for image capturing, dataset training, and individual identification.
- **Tech:** Python, OpenCV (cv2), LBPH.

Achievements

- **Winner:** NSD Hackathon 2025 (Web Dev) – Developed a pet adoption platform under tight deadlines.
- **Winner:** Visionary Techfest 2023 (Cybersecurity) – Built a robust MFA system using Python/Flask.
- **Runner-up:** NSD Hackathon 2025 (ML) – Implemented network traffic anomaly detection using **KNN (80% accuracy)**.
- **3rd Place:** VU Techfest 2024 – Built a Smart Inventory Manager using Flask and SQLite.

Skills

- **Languages:** C, C++, Python, HTML/CSS, SQL.
- **Tools:** Burp Suite, Nessus, Wireshark, Nmap, Linux.
- **Frameworks:** ISO 27001, NIST CSF, Flask, OpenCV, Socket.IO, Scikit-learn.
